EXECUTIVE SUMMARY

Project

In close cooperation and by order of AES Gener, maximum power test and performance tests at Norgener Unit 2, as per CDEC-SING requirement, have been conducted by DNV GL in the period from the 15th of December 2015 until the 17th of December 2015.

The maximum power test was performed on the 15th of December 2015. The duration of the test was five hours, from 13:00 till 18:00.

Purpose

The purpose of the maximum power test is to determine the maximum power of the unit as per specification "Procedimiento DO: Pruebas de Potencia Máxima en Unidades Generadoras" .

Report

In this report the corrected result is presented of the achieved maximum gross power of Norgener Unit 2, during the five hour test.

The measured result is corrected to the applicable nominal reference site conditions of the plant:

- a power factor of 0.85
- a cooling water inlet temperature of 18°C.

Result

In table 1 the measured result of the maximum power test of Norgener Unit 2 is presented.

1 INTRODUCTION

In close cooperation and by order of AES Gener, maximum power test and performance tests at Norgener Unit 2 have been conducted by DNV GL in the period from the 15th of December 2015 until the 17th of December 2015, as per CDEC-SING requirement.

The maximum power test was performed on the 15th of December 2015; the duration of the test was five hours, from 13:00 till 18:00.

The gross power of the generator was measured by means of the plant kWh counter, with 15 minutes interval. This gross power metering system consists of 0.2% class PT's, 0.2% class CT's and 0.2% power meter; the metering system is in compliance with the required 1.0% class or better. The latest calibration certificate of this gross power metering system is added in Appendix A.

Reference values were monitored by the DCS system; the ambient condition in the vicinity of the boiler was measured by means of the temporary installed DNV GL weather station and data log system.

The plant was operated on load control with the nominal control settings and process settings. The frequency control of the unit was disabled, as per CDE-SING requirement. No specific process limits were monitored during the tests, except concerning the steam production of the boiler. The average steam production of the boiler, during the maximum power test, has been determined at 411.9 t/h.

The maximum boiler steam production, as per OEM, is 390 t/h, so we recommend contacting the OEM for further evaluation.

The following external representatives were present during the maximum power test:
